

Figure 1 is a log-log plot showing the scaling of the number of nodes N required to achieve a target error rate ϵ for different Quantum Tolerant Network (QTN) values. The x-axis represents the target error rate ϵ on a logarithmic scale from 0.001 to 0.100. The y-axis represents the number of nodes N on a logarithmic scale from 10^1 to 10^4 . Seven curves are plotted for QTN values of 0.3, 0.2, 0.1, 0.05, 0.02, 0.01, and 0. The curves show that for a fixed error rate, the number of nodes required decreases as the QTN value decreases. The curves for QTN=0.3 and 0.2 are the highest, while the curves for QTN=0.01 and 0 are the lowest and closest to each other.

Type I error
