

Figure 1 is a log-log plot showing the scaling of the number of nodes N versus the number of edges E for different Quantum Tomography Network (QTN) values. The x-axis represents the number of edges E on a logarithmic scale from 0.001 to 0.100. The y-axis represents the number of nodes N on a logarithmic scale from 10 to 100. Seven curves are plotted, each corresponding to a different QTN value: 0.3 (green squares), 0.2 (cyan downward triangles), 0.1 (orange diamonds), 0.05 (brown crosses), 0.02 (blue plus signs), 0.01 (red upward triangles), and 0 (black circles). The curves show that N increases with E , and the rate of increase is higher for larger QTN values. The curve for QTN=0 is the lowest, while the curve for QTN=0.3 is the highest.
